DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8 and 18, drawn to a system for analyzing a biochip.

Group II, claim(s) 9-15, drawn to a method of analyzing a biochip.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Ashburner et al (Gene Ontology: tool for the unification of biology, Nature Genetics, Vol. 25, p.25-29, May 2000) describe the correspondence of gene ontology terms to clustering data obtained from DNA microarray data. The Go term is the technical feature which unites the inventive groups of I and II. The clustering of the array data based on the GO term is another technical feature that unites groups I and II, however since the Ashburner et al teach the use of clustering array data based on correspondence with GO terms (see figure 2) the feature is not special. Thus unity does not exist between groups I and II. Group I and II are drawn to different inventive categories. Group I, directed to an apparatus for analyzing biochips, is not distinguished

Art Unit: 1631

by a contribution over the prior art. Group II, directed to a process of analyzing a biochip is also not distinguished by a contribution over the prior art. In the instant case, the invention of group II, process of analyzing a biochip, could be practiced by hand and does not require the apparatus of Group I

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1631

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
